

Pyramid Analysis Worksheet

Provide a question, task, or debate topic for students to answer. Pair students then allow students to answer the prompt and provide rational, evidence, and details for their answer. Then combine two pairs and ask them to repeat the process, sharing their previous discussions and details and adding to the depth of their answer. When they come to a consensus on their answer, repeat this process again, continuously combining larger groups of students until all students are discussing the answer in a whole group. Allow students to record their answers and rationale & details in this worksheet.
